

# Digital Signal Processing

Rohith\*

## CONTENTS

**Abstract**—This manual provides a simple introduction to digital signal processing.

## 1 SOFTWARE INSTALLATION

Run the following commands

```
sudo apt-get update
sudo apt-get install libffi-dev libsndfile1 python3
  -scipy python3-numpy python3-matplotlib
sudo pip install cffi pysoundfile
```

## 2 DIGITAL FILTER

### 2.1 Download the sound file from

```
wget https://raw.githubusercontent.com/
gadepall/
EE1310/master/filter/codes/Sound_Noise.wav
```

2.2 You will find a spectrogram at <https://academo.org/demos/spectrum-analyzer>. Upload the sound file that you downloaded in Problem ?? in the spectrogram and play. Observe the spectrogram. What do you find?

**Solution:** There are a lot of yellow lines between 440 Hz to 5.1 KHz. These represent the synthesizer key tones. Also, the key strokes are audible along with background noise.

2.3 Write the python code for removal of out of band noise and execute the code.

**Solution:**

```
#pip install soundfile
import soundfile as sf
from scipy import signal
#read .wav file
input_signal,fs = sf.read("Sound_Noise.wav")
```

```
#sampling frequency of Input signal
samp_freq=fs
#order of the filter
order=4
#cutoff frequency 4kHz
cutoff_freq=4000.0
#digital frequency
Wn=2*cutoff_freq/samp_freq
# b and a are numerator and denominator
  polynomials respectively
b, a = signal.butter(order,Wn, "low")
#filter the input signal with butterworth filter
output_signal = signal.filtfilt(b, a,
input_signal)
#output signal = signal.lfilter(b, a,
  input_signal)
#write the output signal into .wav file
sf.write("Sound_With_ReducedNoise.wav",
  output_signal, fs)
```

2.4 The output of the python script in Problem ?? is the audio file Sound\_With\_ReducedNoise.wav. Play the file in the spectrogram in Problem ??. What do you observe?

**Solution:** The key strokes as well as background noise is subdued in the audio. Also, the signal is blank for frequencies above 5.1 kHz.

## 3 DIFFERENCE EQUATION

3.1 Let

$$x(n) = \left\{ \underset{\uparrow}{1}, 2, 3, 4, 2, 1 \right\} \quad (3.1)$$

Sketch  $x(n)$ .

3.2 Let

$$y(n) + \frac{1}{2}y(n-1) = x(n) + x(n-2),$$

$$y(n) = 0, n < 0 \quad (3.2)$$

Sketch  $y(n)$ .

**Solution:** The following code yields Fig. ??.

\*The author is with the Department of Electrical Engineering, Indian Institute of Technology, Hyderabad 502285 India e-mail: gadepall@iith.ac.in. All content in the manuscript is released under GNU GPL. Free to use for anything.

wget <https://github.com/gadepall/EE1310/raw/master/filter/codes/xnyn.py>

Fig. 3.2

3.3 Repeat the above exercise using a C code.

#### 4 Z-TRANSFORM

4.1 The Z-transform of  $x(n)$  is defined as

$$X(z) = \mathcal{Z}\{x(n)\} = \sum_{n=-\infty}^{\infty} x(n)z^{-n} \quad (4.1)$$

Show that

$$\mathcal{Z}\{x(n-1)\} = z^{-1}X(z) \quad (4.2)$$

and find

$$\mathcal{Z}\{x(n-k)\} \quad (4.3)$$

**Solution:** From (??),

$$\begin{aligned} \mathcal{Z}\{x(n-k)\} &= \sum_{n=-\infty}^{\infty} x(n-k)z^{-n} \quad (4.4) \\ &= \sum_{n=-\infty}^{\infty} x(n)z^{-n-1} = z^{-1} \sum_{n=-\infty}^{\infty} x(n)z^{-n} \quad (4.5) \end{aligned}$$

resulting in (??). Similarly, it can be shown that

$$\mathcal{Z}\{x(n-k)\} = z^{-k}X(z) \quad (4.6)$$

4.2 Obtain  $X(z)$  for  $x(n)$  defined in problem ??.

**Solution:**

$$X(z) = \sum_{n=-\infty}^{\infty} x(n)z^{-n} = 1 + \frac{2}{z} + \frac{3}{z^2} + \frac{4}{z^3} + \frac{2}{z^4} + \frac{1}{z^5} \quad (4.7)$$

4.3 Find

$$H(z) = \frac{Y(z)}{X(z)} \quad (4.8)$$

from (??) assuming that the Z-transform is a linear operation.

**Solution:** Applying (??) in (??),

$$Y(z) + \frac{1}{2}z^{-1}Y(z) = X(z) + z^{-2}X(z) \quad (4.9)$$

$$\Rightarrow \frac{Y(z)}{X(z)} = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \quad (4.10)$$

4.4 Find the Z transform of

$$\delta(n) = \begin{cases} 1 & n = 0 \\ 0 & \text{otherwise} \end{cases} \quad (4.11)$$

and show that the Z-transform of

$$u(n) = \begin{cases} 1 & n \geq 0 \\ 0 & \text{otherwise} \end{cases} \quad (4.12)$$

is

$$U(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1 \quad (4.13)$$

**Solution:** It is easy to show that

$$\delta(n) \stackrel{Z}{\rightleftharpoons} 1 \quad (4.14)$$

and from (??),

$$U(z) = \sum_{n=0}^{\infty} z^{-n} \quad (4.15)$$

$$= \frac{1}{1 - z^{-1}}, \quad |z| > 1 \quad (4.16)$$

using the formula for the sum of an infinite geometric progression.

4.5 Show that

$$a^n u(n) \stackrel{Z}{\rightleftharpoons} \frac{1}{1 - az^{-1}} \quad |z| > |a| \quad (4.17)$$

**Solution:** On applying Z-transform:

$$A(z) = \sum_{n=-\infty}^{\infty} a^n u(n) z^{-n} \quad (4.18)$$

$$= \sum_{n=0}^{\infty} \frac{a^n}{z^n}, \quad |z| > |a| \quad (4.19)$$

$$= \frac{1}{1 - \frac{a}{z}} \quad (4.20)$$

Using the formula for infinite geometric progression with  $r = \frac{a}{z}$

4.6 Let

$$H(e^{j\omega}) = H(z = e^{j\omega}). \quad (4.21)$$

Plot  $|H(e^{j\omega})|$ . Is it periodic? If so, find the period.  $H(e^{j\omega})$  is known as the *Discrete Time Fourier Transform* (DTFT) of  $h(n)$ .

**Solution:** The following code plots Fig. ??.

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/dtft.
ipynb
```

$$H(z) = \frac{1 + z^2}{z^2 + \frac{z}{2}} \quad (4.22)$$

$$H(e^{j\omega}) = \frac{1 + e^{2j\omega}}{e^{2j\omega} + \frac{e^{j\omega}}{2}} \quad (4.23)$$

$$H(e^{j\omega}) = \frac{2e^{j\omega}(e^{j\omega} + e^{-j\omega})}{2e^{2j\omega} + e^{j\omega}} \quad (4.24)$$

$$H(e^{j\omega}) = \frac{4\cos(\omega)}{1 + 2e^{j\omega}} \quad (4.25)$$

$$H(e^{j\omega}) = \frac{\cos(\omega)}{1 + 2\cos(\omega) + 2j\sin(\omega)} \quad (4.26)$$

$$|H(e^{j\omega})| = \frac{|\cos(\omega)|}{\sqrt{5 + 4\cos(\omega)}} \quad (4.27)$$

Therefore, the period is  $2\pi$

Fig. 4.6:  $|H(e^{j\omega})|$

4.7 Express  $h(n)$  in terms of  $H(e^{j\omega})$ .

We know that,

$$H(z) = \sum_{n=-\infty}^{\infty} h(n)e^{-jnz} \quad (4.28)$$

Now,

$$\int_{-\pi}^{\pi} H(z)e^{jkz} dz \quad (4.29)$$

$$= \int_{-\pi}^{\pi} \sum_{n=-\infty}^{\infty} h(n)e^{-jnz} e^{jkz} dz \quad (4.30)$$

If  $n = k$ , the above integral evaluates to:

$$2\pi h(k) = 2\pi h(n) \quad (4.31)$$

If  $n \neq k$ , the above integral evaluates to:

$$\sum_{n=-\infty}^{\infty} \int_{-\pi}^{\pi} h(n)e^{jz(k-n)} dz \quad (4.32)$$

$$= \sum_{n=-\infty}^{\infty} h(n) \int_{-\pi}^{\pi} e^{jz(k-n)} dz \quad (4.33)$$

$$= \sum_{n=-\infty}^{\infty} h(n) \int_{-\pi}^{\pi} \cos(z(k-n)) + j\sin(z(k-n)) dz \quad (4.34)$$

Taking  $z(k-n) = t$ ,

$$\sum_{n=-\infty}^{\infty} h(n) \int_{-\pi(k-n)}^{\pi(k-n)} \cos(t) + j\sin(t) dt \quad (4.35)$$

$$= 0 \quad (4.36)$$

## 5 IMPULSE RESPONSE

5.1 Using long division, find

$$h(n), \quad n < 5 \quad (5.1)$$

for  $H(z)$  in (??).

**Solution:**

$$H(z) = \frac{1 + z^{-2}}{1 + \frac{z^{-1}}{2}} \quad (5.2)$$

Let

$$z^{-1} = t \quad (5.3)$$

Hence,

$$1 + t^2 = (2t - 4)\left(1 + \frac{t}{2}\right) + 5 \quad (5.4)$$

$$H(z) = (2z^{-1} - 4) + \frac{5}{1 + \frac{1}{2z}} \quad (5.5)$$

$$= \frac{2}{z} - 4 + 5 - \frac{5}{2z} + \frac{5}{4z^2} + \dots \quad (5.6)$$

$$= 1 - \frac{1}{2z} + \frac{5}{4z^2} - \frac{5}{8z^3} + \frac{5}{16z^4} \quad (5.7)$$

Hence, by comparing with the coefficients with the definition of z-transform

$$h(0) = 1 \quad (5.8)$$

$$h(1) = -\frac{1}{2} \quad (5.9)$$

$$h(2) = \frac{5}{4} \quad (5.10)$$

$$h(3) = -\frac{5}{8} \quad (5.11)$$

$$h(4) = \frac{5}{16} \quad (5.12)$$

5.2 Find an expression for  $h(n)$  using  $H(z)$ , given that

$$h(n) \stackrel{Z}{\rightleftharpoons} H(z) \quad (5.13)$$

and there is a one to one relationship between  $h(n)$  and  $H(z)$ .  $h(n)$  is known as the *impulse response* of the system defined by (??).

**Solution:** From (??),

$$H(z) = \frac{1}{1 + \frac{1}{2}z^{-1}} + \frac{z^{-2}}{1 + \frac{1}{2}z^{-1}} \quad (5.14)$$

$$\Rightarrow h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.15)$$

For  $\left|\frac{1}{2z}\right| < 1$  or  $|z| > \frac{1}{2}$  using (??) and (??).

5.3 Sketch  $h(n)$ . Is it bounded? Justify theoretically.

**Solution:** The following code plots Fig. ??.

```
wget https://raw.githubusercontent.com/gadepall/EE1310/master/filter/codes/hn.py
```

$h(n)$  is bounded as it tends to 0 as  $n$  tends to 12

5.4 Convergent? Justify using the ratio test.

**Solution:**

$$h(n) = \left(\frac{-1}{2}\right)^n u(n) + \left(\frac{-1}{2}\right)^{n-2} u(n-2) \quad (5.16)$$

Fig. 5.3:  $h(n)$  as the inverse of  $H(z)$

As  $n \rightarrow \infty$ ,

$$h(n)/h(n-1) = \frac{\left(\frac{-1}{2}\right)^n + \left(\frac{-1}{2}\right)^{n-2}}{\left(\frac{-1}{2}\right)^{n-1} + \left(\frac{-1}{2}\right)^{n-3}} = -\frac{1}{2} \quad (5.17)$$

As  $\left|\frac{h(n)}{h(n-1)}\right| < 1$ , the series is convergent due to which it is bounded.

5.5 The system with  $h(n)$  is defined to be stable if

$$\sum_{n=-\infty}^{\infty} h(n) < \infty \quad (5.18)$$

Is the system defined by (??) stable for the impulse response in (??)?

**Solution:** By using  $h(n)$  from 5.3

$$h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.19)$$

$$= \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^n u(n) + \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.20)$$

$$= \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^n u(n) + \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.21)$$

$$= \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^n + \sum_{n=-\infty}^{\infty} \left(-\frac{1}{2}\right)^{n-2} \quad (5.22)$$

$$= \frac{2}{3} + \frac{2}{3} < \infty \quad (5.23)$$

$$= \frac{2}{3} + \frac{2}{3} < \infty \quad (5.24)$$

5.6 Verify the above result using a python code.

### 5.7 Compute and sketch $h(n)$ using

$$h(n) + \frac{1}{2}h(n-1) = \delta(n) + \delta(n-2), \quad (5.25)$$

This is the definition of  $h(n)$ .

**Solution:** The following code plots Fig. ??.  
Note that this is the same as Fig. ??.

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/hndef
.ipynb
```

Fig. 5.7:  $h(n)$  from the definition

### 5.8 Compute

$$y(n) = x(n) * h(n) = \sum_{k=-\infty}^{\infty} x(k)h(n-k) \quad (5.26)$$

Comment. The operation in (??) is known as *convolution*.

**Solution:** The following code plots Fig. ??.  
Note that this is the same as  $y(n)$  in Fig. ??.

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/
ynconv.ipynb
```

### 5.9 Express the above convolution using a Teoplitz matrix.

### 5.10 Show that

$$y(n) = \sum_{k=-\infty}^{\infty} x(n-k)h(k) \quad (5.27)$$

**Solution:** We know that,

$$y(n) = \sum_{k=-\infty}^{\infty} x(k)h(n-k) \quad (5.28)$$

Fig. 5.8:  $y(n)$  from the definition of convolution

Taking  $k = n-k$

$$y(n) = \sum_{k=-\infty}^{\infty} x(n-k)h(k) \quad (5.29)$$

### 5.11 Oppenheimer question

$$x[n] = u[n+10] - u[n+5] \quad (5.30)$$

$$= \begin{cases} 1 & -10 \leq n < -5 \\ 0 & \text{otherwise} \end{cases} \quad (5.31)$$

$x[n]$  is finite length and has only positive powers of  $z$ , hence, its ROC is  $|z| < \infty$

### 6 DFT

#### 6.1 Compute

$$X(k) \triangleq \sum_{n=0}^{N-1} x(n)e^{-j2\pi kn/N}, \quad k = 0, 1, \dots, N-1 \quad (6.1)$$

and  $H(k)$  using  $h(n)$ .

#### 6.2 Compute

$$Y(k) = X(k)H(k) \quad (6.2)$$

#### 6.3 Compute

$$y(n) = \frac{1}{N} \sum_{k=0}^{N-1} Y(k) \cdot e^{j2\pi kn/N}, \quad n = 0, 1, \dots, N-1 \quad (6.3)$$

**Solution:** The following code plots Fig. ??.  
Note that this is the same as  $y(n)$  in Fig. ??.

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/ynfft.
ipynb
```

Fig. 6.3:  $y(n)$  from the DFT

6.4 Repeat the previous exercise by computing  $X(k)$ ,  $H(k)$  and  $y(n)$  through FFT and IFFT.

### 7 FFT

1. The DFT of  $x(n)$  is given by

$$X(k) \triangleq \sum_{n=0}^{N-1} x(n)e^{-j2\pi kn/N}, \quad k = 0, 1, \dots, N-1 \quad (7.1)$$

2. Let

$$W_N = e^{-j2\pi/N} \quad (7.2)$$

Then the  $N$ -point DFT matrix is defined as

$$\vec{F}_N = [W_N^{mn}], \quad 0 \leq m, n \leq N-1 \quad (7.3)$$

where  $W_N^{mn}$  are the elements of  $\vec{F}_N$ .

3. Let

$$\vec{I}_4 = \vec{e}_4^1 \vec{e}_4^2 \quad \vec{e}_4^3 \vec{e}_4^4 \quad (7.4)$$

be the  $4 \times 4$  identity matrix. Then the 4 point DFT permutation matrix is defined as

$$\vec{P}_4 = \vec{e}_4^1 \vec{e}_4^3 \quad \vec{e}_4^2 \vec{e}_4^4 \quad (7.5)$$

4. The 4 point DFT diagonal matrix is defined as

$$\vec{D}_4 = \text{diag}(W_8^0 W_8^1 \quad W_8^2 W_8^3 \quad \text{ref}(7.6))$$

5. Show that

$$W_N^2 = W_{N/2} \quad (7.7)$$

**Solution:**

$$W_N^2 = e^{-j2\pi \cdot 2/N} \quad (7.8)$$

$$= e^{-j2\pi/(N/2)} \quad (7.9)$$

$$= W_{N/2} \quad (7.10)$$

6. Show that

$$\vec{F}_4 = \begin{bmatrix} \vec{I}_2 & \vec{D}_2 \\ \vec{I}_2 & -\vec{D}_2 \end{bmatrix} \begin{bmatrix} \vec{F}_2 & 0 \\ 0 & \vec{F}_2 \end{bmatrix} \vec{P}_4 \quad (7.11)$$

**Solution:**

$$\vec{F}_4 = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & W_N & W_N^2 & W_N^3 \\ 1 & W_N^2 & W_N^4 & W_N^6 \\ 1 & W_N^3 & W_N^6 & W_N^9 \end{bmatrix} \quad (7.12)$$

On post multiplying  $F_4$  with  $P_4$  and using  $W_N^4 = 1$  we get,

$$\vec{F}_4 \vec{P}_4 = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & W_N^2 & W_N & W_N^3 \\ 1 & 1 & W_N^2 & W_N^6 \\ 1 & W_N^2 & W_N^3 & W_N^9 \end{bmatrix} \quad (7.13)$$

Using  $W_N^2 = W_{N/2}$ , upper left and lower left  $2 \times 2$  matrices become equal to  $F_2$ . The top right matrix =

$$\begin{bmatrix} 1 & 1 \\ W_N & W_N^3 \end{bmatrix} \quad (7.14)$$

=

$$\begin{bmatrix} 1 & 0 \\ 0 & W_N \end{bmatrix} \begin{bmatrix} 1 & 1 \\ 1 & W_N^2 \end{bmatrix} \quad (7.15)$$

=  $D_2 F_2$

Similarly, bottom right matrix =  $-D_2 F_2$

Hence,

$F_4 P_4 =$

$$\begin{bmatrix} \vec{F}_2 & D_2 \vec{F}_2 \\ \vec{F}_2 & -D_2 \vec{F}_2 \end{bmatrix} \quad (7.16)$$

=

$$\begin{bmatrix} \vec{I}_2 & \vec{D}_2 \\ \vec{I}_2 & -\vec{D}_2 \end{bmatrix} \begin{bmatrix} \vec{F}_2 & 0 \\ 0 & \vec{F}_2 \end{bmatrix} \quad (7.17)$$

7. Show that

$$\vec{F}_N = \begin{bmatrix} \vec{I}_{N/2} & \vec{D}_{N/2} \\ \vec{I}_{N/2} & -\vec{D}_{N/2} \end{bmatrix} \begin{bmatrix} \vec{F}_{N/2} & 0 \\ 0 & \vec{F}_{N/2} \end{bmatrix} \vec{P}_N \quad (7.18)$$

**Solution:** Similar to the above, we post multi-

ply  $F_N$  with  $P_N$  so that the resultant matrix can be split into 4 parts: top-left, top-right, bottom-left and bottom-right: all being  $n/2 * n/2$  square matrices.

Top left matrix = Bottom left matrix =  $F_{N/2}$

Top right matrix =  $D_{N/2}F_{N/2}$

Bottom right matrix =  $-D_{N/2}F_{N/2}$  Hence,

$F_N P_N =$

$$\begin{bmatrix} \vec{F}_{N/2} & D_{N/2}\vec{F}_{N/2} \\ \vec{F}_{N/2} & -D_{N/2}\vec{F}_{N/2} \end{bmatrix} \quad (7.19)$$

8. Find

$$\vec{P}_4 \vec{x} \quad (7.20)$$

**Solution:**

$\vec{x} =$

$$\begin{bmatrix} 1 \\ 2 \\ 3 \\ 4 \\ 2 \\ 1 \end{bmatrix} \quad (7.21)$$

So,  $\vec{P}_4 \vec{x} =$

$$\begin{bmatrix} 1 \\ 3 \\ 2 \\ 4 \\ 0 \\ 0 \end{bmatrix} \quad (7.22)$$

9. Show that

$$\vec{X} = \vec{F}_N \vec{x} \quad (7.23)$$

where  $\vec{x}, \vec{X}$  are the vector representations of  $x(n), X(k)$  respectively.

**Solution:**

$\vec{x} =$

$$\begin{bmatrix} x[0] \\ x[1] \\ x[2] \\ \vdots \\ \vdots \\ \vdots \\ x[n-1] \end{bmatrix} \quad (7.24)$$

$F_N =$

$$\begin{bmatrix} 1 & 1 & 1 & \dots & 1 \\ 1 & W_N & W_N^2 & \dots & W_N^{N-1} \\ 1 & W_N^2 & W_N^4 & \dots & W_N^{2N-2} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ 1 & W_N^{N-1} & W_N^{2(N-1)} & \dots & W_N^{N(N-1)} \end{bmatrix} \quad (7.25)$$

$$\vec{X} = \begin{bmatrix} X[0] \\ X[1] \\ X[2] \\ \vdots \\ \vdots \\ X[n-1] \end{bmatrix} \quad (7.26)$$

By definition,  $X[k] = \sum_{n=0}^{N-1} x(n)e^{-2\pi jkn/N}$

Hence, by the definition of matrix multiplication:

$$\vec{X} = \vec{F}_N \vec{x} =$$

$$\begin{bmatrix} 1 & 1 & 1 & \dots & 1 \\ 1 & W_N & W_N^2 & \dots & W_N^{N-1} \\ 1 & W_N^2 & W_N^4 & \dots & W_N^{2N-2} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ 1 & W_N^{N-1} & W_N^{2(N-1)} & \dots & W_N^{N(N-1)} \end{bmatrix} \begin{bmatrix} x[0] \\ x[1] \\ x[2] \\ \vdots \\ \vdots \\ x[N-1] \end{bmatrix} \quad (7.27)$$

10. Derive the following Step-by-step visualisation of 8-point FFTs into 4-point FFTs and so on

$$\begin{bmatrix} X(0) \\ X(1) \\ X(2) \\ X(3) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} + \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.28)$$

$$\begin{bmatrix} X(4) \\ X(5) \\ X(6) \\ X(7) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} - \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.29)$$

4-point FFTs into 2-point FFTs

$$\begin{bmatrix} X_1(0) \\ X_1(1) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.30)$$

$$\begin{bmatrix} X_1(2) \\ X_1(3) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.31)$$

$$\begin{bmatrix} X_2(0) \\ X_2(1) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.32)$$

$$\begin{bmatrix} X_2(2) \\ X_2(3) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.33)$$

$$P_8 \begin{bmatrix} x(0) \\ x(1) \\ x(2) \\ x(3) \\ x(4) \\ x(5) \\ x(6) \\ x(7) \end{bmatrix} = \begin{bmatrix} x(0) \\ x(2) \\ x(4) \\ x(6) \\ x(1) \\ x(3) \\ x(5) \\ x(7) \end{bmatrix} \quad (7.34)$$

$$P_4 \begin{bmatrix} x(0) \\ x(2) \\ x(4) \\ x(6) \end{bmatrix} = \begin{bmatrix} x(0) \\ x(4) \\ x(2) \\ x(6) \end{bmatrix} \quad (7.35)$$

$$P_4 \begin{bmatrix} x(1) \\ x(3) \\ x(5) \\ x(7) \end{bmatrix} = \begin{bmatrix} x(1) \\ x(5) \\ x(3) \\ x(7) \end{bmatrix} \quad (7.36)$$

Therefore,

$$\begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} = F_2 \begin{bmatrix} x(0) \\ x(4) \end{bmatrix} \quad (7.37)$$

$$\begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} = F_2 \begin{bmatrix} x(2) \\ x(6) \end{bmatrix} \quad (7.38)$$

$$\begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} = F_2 \begin{bmatrix} x(1) \\ x(5) \end{bmatrix} \quad (7.39)$$

$$\begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} = F_2 \begin{bmatrix} x(3) \\ x(7) \end{bmatrix} \quad (7.40)$$

**Solution:**

For every k,  $X[k] =$

$$\sum_0^7 x(n)e^{-2jk\pi n/8} = \sum_0^3 x(2n)e^{-2jk(2n)\pi/8} + \sum_0^3 x(2n+1)e^{-2jk(2n+1)\pi/8} \quad (7.41)$$

=

$$= \sum_0^3 x(2n)e^{-2jk(n)\pi/4} + e^{-2kj\pi/8} \left( \sum_0^3 x(2n+1)e^{-2jk(n)\pi/4} \right) \quad (7.42)$$

=  $X_1[k] + e^{-2kj\pi/8} X_2[k]$ , where  $X_1[k]$  is FFT of even terms and  $X_2[k]$  is FFT of odd terms.

Also, if  $k > 4$ ,  
 $e^{-2jk\pi/8} = -e^{-2j(k-4)\pi/8}$

Hence,

$$\begin{bmatrix} X(0) \\ X(1) \\ X(2) \\ X(3) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} + \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.43)$$

$$\begin{bmatrix} X(4) \\ X(5) \\ X(6) \\ X(7) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} - \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.44)$$

Decomposing into 2 point dft matrices:

$$\begin{bmatrix} X_1(0) \\ X_1(1) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.45)$$

$$\begin{bmatrix} X_1(2) \\ X_1(3) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.46)$$

$$\begin{bmatrix} X_2(0) \\ X_2(1) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.47)$$

$$\begin{bmatrix} X_2(2) \\ X_2(3) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.48)$$

11. For

$$\vec{x} = 1 \quad (7.49)$$

$$2 \quad (7.50)$$

$$3 \quad (7.51)$$

$$4 \quad (7.52)$$

$$2 \quad (7.53)$$

$$1 \quad (7.54)$$

compute the DFT using (??)

**Solution:**

$$\vec{F}_6 = [W_6^{MN}]$$

Where  $M$  is the index of row of matrix and  $N$  the index of column of matrix

$$\vec{F}_6 \vec{x}$$

=

$$\begin{bmatrix} 13 \\ -4 - \sqrt{3}j \\ 1 \\ -1 \\ 1 \\ -4 + \sqrt{3}j \end{bmatrix} \quad (7.55)$$

12. Repeat the above exercise using the FFT after zero padding  $\vec{x}$ .

**Solution:**

$\vec{x} =$

$$\begin{bmatrix} 1 \\ 2 \\ 3 \\ 4 \\ 2 \\ 1 \\ 0 \\ 0 \end{bmatrix} \quad (7.56)$$

Using ,

$$\vec{F}_8 = \begin{bmatrix} \vec{I}_4 & \vec{D}_4 \\ \vec{I}_4 & -\vec{D}_4 \end{bmatrix} \begin{bmatrix} \vec{F}_4 & 0 \\ 0 & \vec{F}_4 \end{bmatrix} \vec{P}_8 \quad (7.57)$$

$$\vec{F}_4 = \begin{bmatrix} \vec{I}_2 & \vec{D}_2 \\ \vec{I}_2 & -\vec{D}_2 \end{bmatrix} \begin{bmatrix} \vec{F}_2 & 0 \\ 0 & \vec{F}_2 \end{bmatrix} \vec{P}_4 \quad (7.58)$$

$$\vec{F}_2 = \begin{bmatrix} \vec{I}_1 & \vec{D}_1 \\ \vec{I}_1 & -\vec{D}_1 \end{bmatrix} \begin{bmatrix} \vec{F}_1 & 0 \\ 0 & \vec{F}_1 \end{bmatrix} \vec{P}_2 \quad (7.59)$$

$$\vec{F}_1 = [1] \quad (7.60)$$

Calculating  $\vec{F}_2$ ,

$$\vec{F}_2 = \begin{bmatrix} \vec{F}_1 & D_1 \vec{F}_1 \\ \vec{F}_1 & -D_1 \vec{F}_1 \end{bmatrix} \vec{P}_2 \quad (7.61)$$

$$= \begin{bmatrix} 1 & 1 \\ 1 & -1 \end{bmatrix} \quad (7.62)$$

Calculating  $\vec{F}_4$ ,

$$\vec{D}_2 = \text{diag}(1, W_4) = \begin{bmatrix} 1 & 0 \\ 0 & -j \end{bmatrix} \quad (7.63)$$

$$D_2 \vec{F}_2 = \begin{bmatrix} 1 & 0 \\ 0 & -j \end{bmatrix} \begin{bmatrix} 1 & 1 \\ 1 & -1 \end{bmatrix} \quad (7.64)$$

$$= \begin{bmatrix} 1 & 1 \\ -j & j \end{bmatrix} \quad (7.65)$$

$$\vec{F}_4 = \begin{bmatrix} \vec{F}_2 & D_2 \vec{F}_2 \\ \vec{F}_2 & -D_2 \vec{F}_2 \end{bmatrix} \vec{P}_4 \quad (7.66)$$

$$\vec{F}_4 = \begin{bmatrix} 1 & 0 & 1 & 1 \\ 0 & 1 & -j & j \\ 1 & 0 & -1 & -1 \\ 0 & 1 & j & -j \end{bmatrix} \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad (7.67)$$

$$= \begin{bmatrix} 1 & 1 & 0 & 1 \\ 0 & -j & 1 & j \\ 1 & -1 & 0 & j \\ 0 & j & 1 & -j \end{bmatrix} \quad (7.68)$$

Calculating  $\vec{F}_8$ ,

$$\vec{D}_4 = \text{diag}(1, W_8, W_8^2, W_8^3) \quad (7.69)$$

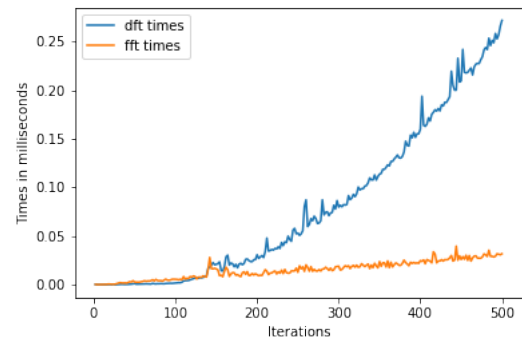

$$= \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & \frac{1-j}{\sqrt{2}} & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & \frac{-1-j}{\sqrt{2}} \end{bmatrix} \quad (7.70)$$

$$D_4 \vec{F}_4 = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & \frac{1-j}{\sqrt{2}} & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & \frac{-1-j}{\sqrt{2}} \end{bmatrix} \begin{bmatrix} 1 & 1 & 0 & 1 \\ 0 & -j & 1 & j \\ 1 & -1 & 0 & j \\ 0 & j & 1 & -j \end{bmatrix} \quad (7.71)$$

$$= \begin{bmatrix} 1 & 1 & 0 & 1 \\ 0 & \frac{-1-j}{\sqrt{2}} & \frac{1-j}{\sqrt{2}} & \frac{1+j}{\sqrt{2}} \\ -1 & 1 & 0 & -j \\ 0 & \frac{1-j}{\sqrt{2}} & \frac{-1-j}{\sqrt{2}} & \frac{-1+j}{\sqrt{2}} \end{bmatrix} \quad (7.72)$$

Therefore, from  $F_8$ ,

$$\vec{X} = \begin{bmatrix} 13 \\ -3.12 - 6.53j \\ j \\ 1.12 - 0.53j \\ -1 \\ 1.12 + 0.53j \\ -j \\ -3.12 + 6.5355j \end{bmatrix} \quad (7.73)$$

13. Write a C program to compute the 8-point FFT.

**Solution:**

```
#include <stdio.h>
#include <stdlib.h>
#include <math.h>
```

```

#include <stdlib.h>
#include <complex.h>
#include <time.h>
#define EPS 1e-6

complex *myfft(int n, complex *a)
{
    if (n == 1) return a;
    complex *g = (complex *)malloc(n
        /2*sizeof(complex));
    complex *h = (complex *)malloc(n
        /2*sizeof(complex));
    for (int i = 0; i < n; i++)
    {
        if (i%2) h[i/2] = a[i];
        else g[i/2] = a[i];
    }
    g = myfft(n/2, g);
    h = myfft(n/2, h);
    for (int i = 0; i < n; i++) a[i] = g[i
        %(n/2)] + cexp(-I*2*M_PI*i/n)
        *h[i%(n/2)];
    free(g);
    free(h);
    return a;
}

int main()
{
    int n = 8;
    complex *a;
    a = (complex *)malloc(sizeof(
        complex)*n);
    *a = 1.0, *(a+1) = 2.0, *(a+2) =
        3.0, *(a+3) = 4.0, *(a+4) = 2.0,
        *(a+5) = 1.0, *(a+6) = 0.0, *(a
        +7) = 0.0;
    complex* b;
    b = myfft(n, a);
    for (int i = 0; i < n; i++) printf("X
        (%d) = %lf + %lfj\n", i, creal
        (*(b+i)), cimag(*(b+i)));
    free(b);
    return 0;
}

```
